

01 / EXPLORE CONNECTIONS

Train Tracks

Draw one continuous track from A to B, joining square centres horizontally or vertically. Do not branch, cross or visit a square twice. Top and right totals count track squares in each column and row. Keep the printed track pieces.

EASY

Find a route across the four-by-four grid.

BUILD THE WHOLE ROUTE

Each square containing any part of the track counts once. Every used square must belong to the same route from A to B.

Tip: mark squares you know must stay empty with a small cross.

MEDIUM

Find a route across the five-by-five grid.

BUILD THE WHOLE ROUTE

Each square containing any part of the track counts once. Every used square must belong to the same route from A to B.

Tip: mark squares you know must stay empty with a small cross.

02 / EXPLORE CONNECTIONS

Bridges

Join the islands with straight horizontal or vertical bridges. Each island needs exactly its printed number of bridges. Allow at most two between a pair. Bridges cannot cross or pass through islands. Connect every island into one network.

EASY

Connect five islands.

3

3

COUNT EACH LINE

Two parallel lines are two bridges. A bridge can only go to the next island in that direction.

4

2

2

The finished network must let you travel from any island to every other island.

MEDIUM

Connect nine islands.

03 / EXPLORE CONNECTIONS

Slitherlink

Join neighbouring dots with horizontal or vertical lines to make one closed loop. A number tells you how many of the four edges around its cell are used. The loop cannot cross or branch. Blank cells have no number constraint.

EASY Every cell has a clue.

ONE LOOP, NO LOOSE ENDS

At each dot, either no lines or exactly two lines meet. A 0 rules out all four edges around its cell.

Small crosses on impossible edges can help you keep track.

MEDIUM Some clue numbers have been removed.

ONE LOOP, NO LOOSE ENDS

At each dot, either no lines or exactly two lines meet. A 0 rules out all four edges around its cell.

Small crosses on impossible edges can help you keep track.
